

ATS/CIRA Colloquium

David S. Battisti
from the University of Washington

Hosted by Jim Hurrell

3 p.m. Thursday, April 14
ATS 101 or Microsoft Teams

**Projected increases in western US forest fires
with growing fuel constraints**

The annual forested area that has burned in the western US has increased markedly in the past 40 years. Here we examine the causes and present 30-year projections of future area burned due to climate change, including the potential for fire-fuel feedbacks to limit future fire area burned.
