

Dave Randall

A University Perspective on Climate Modeling

Thursday, April 4, 2013

**ATS room 101; Discussion will begin at 3:30pm
Refreshments will be served at 3:00pm in the weather lab**

Climate modeling began about 50 years ago, as a purely academic endeavor. Although things have changed considerably, especially during the past 20 years, universities have a continuing major role in model development and applications, and in training young modelers-to-be. I will discuss the history, comment on where we are now, and offer some thoughts about where the field is going.
